

'JEEP' 1972.

'JEEP' TRUCK

MORE POWER.

TOUGHNESS.

TRANSFER CASE

Quiet operating, 2-speed transfer case doubles number of gear ratios.

TRANSMISSION

Full synchromesh 3-speed and 4-speed manual or turbo hydra-matic transmissions. Built for toughness and longer life.

ENGINE

Choice of 3 tough engines: 6-cylinder, 110 net horsepower; two V8 engines, 150 and 175 net horsepower.

FRAME

High strength. Built for rugged terrain. Resists bending and sagging, yet flexible enough for more safety and comfort.

POWER STEERING

New, more powerful power steering. Better quality and quieter operation.

As good as 'Jeep' is, we keep finding ways to make it better.

The only off-road vehicle with three engines.

The 1972 'Jeep' Truck offers a wide range of power teams with three engine and three transmission options. There's an engine to match any task from the standard 6 cylinder, 110 net horsepower, combining power with economy, to the two big optional V8, 150 and 175 net horsepower engines, for those extra tough jobs—carrying, dumping, towing, plowing and winching in the harshest conditions. This year, the all-famous 'Jeep' engines incorporate rocker arms with "cylindrical" bearings for longer service life and a quieter operating valve train.

With any engine, there's a choice of two full-synchromesh manual transmissions: 3-speed column and 4-speed floor shifts, or the turbo hydra-matic column shift. For double the number of gear ratios, 'Jeep' has a quiet operating 2-speed transfer case linked to the transmission.

To ensure the fullest power distribution to the wheels 'Jeep' Truck has an optional "Trac-lok" differential which reduces wheel spin by automatically proportioning usable torque to the wheel that has traction.

The stuff 'Jeeps' are made of.

Frames: All 'Jeep' frames have a yield strength ranging from 35,000 to 40,000 p.s.i., and a range in tensile strength of 47,000 to 60,000 p.s.i. This high strength enables 'Jeep' to withstand extremely high stresses encountered in many rugged off-road conditions. 'Jeep' frames are rigid enough to allow resistance against bending and sagging, yet resilient enough to provide some flexibility for better protection over rugged terrain.

Suspension: The hypoid full-floating gears reduce stresses on the axle shafts and make the steering easier. Universal joints at the outer end of each axle allow a continuous flow of power to the front wheels, regardless of their turning position.

The rear axle is semi-floating (full floating—8000 lb. GVW) with hypoid pinion and ring gears, hardened of alloy steel with extra-deep, square teeth for heavy-duty service, able to tackle any heavy load.

The recirculating-ball steering system is low-friction. The steering shaft is connected to the steering gear through a flexible coupling which virtually eliminates the transmission of road shock vibrations and noises to the steering wheel. This coupling makes steering easier, even over rutted ground, and provides for quieter driving.

The high capacity body features small wheelhouses for greater load-space in the rear. The large tailgate opening allows easy access for loading those big, heavy loads. Also, the cargo floor is made of sturdy rib-reinforced steel to withstand the roughest treatment and give long life.

One good turn deserves a 'Jeep'.

'Jeep' Truck comes in two wheelbase lengths: 120" and 132". Both possess exceptional off-road capabilities. Loaded with features which give it great utility characteristics, the 'Jeep' Truck is a superior product in the 4-WD pickup class. Its combination recirculating-ball steering system, tough suspension and chassis give it outstanding performances in maneuverability, ruggedness and safety. Its wide tread and heavy-duty springs ensure that extra stability on steep hillsides over its major competitors. Its high ground clearance and low center of gravity means it can drive over almost any obstacle.

Also, this year's optional power steering unit is new. With its hydraulic assist, steering is much easier and quieter. Maneuvering needs much less effort and road shocks are further absorbed. Yet, you are able to maintain a safe "feel of the road," normally obtained only with manual steering.

These are just a few reasons why 'Jeep' Truck gives you more mobility at no sacrifice to other features you would expect from a 4-WD truck.

Features that will make molehills out of mountains.

'Jeep' Truck is built with the kind of toughness and versatility to handle almost any kind of job you can give it. This year, there's a new 6000 GVW model in the 120 inch wheelbase. This means that 'Jeep' now offers a total of six payload choices in two wheelbase lengths. The 120 inch wheelbase is available in 5000 and 6000 GVW's, and the 132 inch wheelbase in 5000, 6000, 7000 and 8000 GVW's. No other competitor can match such a wide selection.

Add to this, 'Jeep's' choice of options . . . power take-off, choice of electrical or mechanical winches, rear step bumper, dump body, angle blade and wrecker unit, and there's almost nothing it can't handle. Huge load space plus wide payload and option choice equals the most versatile vehicle in the 4-WD pick-up class — 'Jeep' Truck.

This year, the interior also has improved features for more comfort and safety inside and new optional bucket seats.

Other special accessories include power steering, power brakes, "Trac-lok" differential, fresh air heater and defroster and air conditioner.

With changes we've made this year one thing hasn't changed since 1941. It's still the best off-road vehicle in the world.

Equipment and power features, illustrated or described in this brochure, are optional at extra cost unless otherwise specified. Certain equipment items may not be available for all models. American Motors, whose policy is one of continuous improvement, reserves the right to discontinue or change specifications, models, equipment or prices at any time without incurring any obligation. This also applies to local assembly or manufacture areas where local content requirements may affect standard and/or optional specifications.

MOBILITY.

VERSATILITY.
